

# Cognitive Intervention Programme

Cognitive Intervention is not tutoring. Instead, the focus is on changing how the brain grasps and uses incoming information to become a better overall learner

Cognitive Intervention works to strengthen student's abilities to learn by improving executive function training in 8 core cognitive capacities

including: sustained attention, working memory, speed of processing, response inhibition, cognitive flexibility, category formation, pattern recognition and simultaneous attention. Cognitive Intervention is fun to do! We use a unique blend of personal training (one-on-one) and digital training on a computer.
